

## Montgomery Place CA Update – June 2026

### Completion of the Dundonald Avenue Solar Farm project

Thank you to the Montgomery Place community for your important and continued support for the Dundonald Avenue Solar Farm project. We are pleased to share that construction of the facility has now been completed, and the solar farm is fully operational.

The Dundonald Avenue Solar Farm is Saskatoon Light & Power's first utility-scale solar project and the largest solar installation in Saskatoon. Located on approximately 5.7 hectares (14 acres) of land east of Dundonald Avenue and south of 11th Street West, the 2.8-megawatt facility represents an important milestone in the City's continued commitment to sustainable and renewable energy initiatives.

Key project highlights include:

- More than 4,500 solar photovoltaic (PV) panels installed
- Generates enough electricity to power over 400 homes annually — roughly the size of an entire neighbourhood such as the Willows or Richmond Heights
- Expected to reduce greenhouse gas emissions by more than 23,000 tonnes over the project's 30-year lifespan, equivalent to removing more than 160 vehicles from the road each year
- Estimated annual savings and revenue benefits of approximately \$300,000 through reduced electricity purchases from SaskPower

- Naturalized landscaping designed to enhance biodiversity, improve soil health, reduce erosion, and incorporate vines along the north-west chain link fence to improve site aesthetics

The total project cost was approximately \$7.3 million, with funding support of \$2.57 million provided through the Government of Canada and the Province of Saskatchewan under the Investing in Canada Infrastructure Program (ICIP), along with additional federal support of \$0.12 million through the Natural Infrastructure Fund (NIF).

We appreciate the community's patience and cooperation throughout construction and look forward to the long-term environmental and economic benefits this project will bring to Saskatoon.
